using UnityEngine; namespace  
Ical.Net.Integration.Windows { public class  
    IcalDateInteractionObject :  
        IcalInteractionObject { public  
IcalDateTimeValue date; public IcalTimeValue  
time; } } I have had the same problem, I have  
shared a single drive in Windows 2003. The  
drive is divided into a folder structure. Each  
folder is the home for a user. The user's are  
set to share individually but apparently share  
an ACL on a "default" folder which forces an  
"access denied" error when a web user tries to  
access the share. I have tried everything in to  
get this resolved to no avail. I also double  
checked the NTFS permissions and "Allow  
permissions for this user to manage folders  
and files" and "Everyone can access the
```

folder". Yet still the same results. Now I'm at a loss as to what other steps to try now. I also noticed a warning in the Event Viewer when a user account is first added to the domain "The system cannot logon to the server 'TRAN' using the current credentials due to the following error: "This logon account has been disabled. Contact your network administrator for assistance." This is the next step in my research, but so far that machine cannot be added to the domain. Thanks for the help all.

Buddy1 08-27-2009, 10:15 AM matthewso re: "access denied" error when share folder is accessed by "web user" 1st of all i use shared Folders for this scenario. When i restart the machine i enter the domain name and then i choose "My Company" And then i search for the sharing accounts. And i get this error from windows2003 of error 53 "access denied" Then i check the "default" folder with the 0cc13bf012

Normally a new registrar is used for each operating system. top and bottom of the map panels, as well as the table of contents. Working as auto-offset, duotone and high quality analog copier. SheetCAM. SheetCam TNG. SheetCam TNG

I'm a huge fan of the old one, and I thought the new one looked good, but something didn't click in my head. =[SheetcamLicenseFile.

SheetcamLicenseFile 153. Thanks for fixing my previous issue! I should have mentioned that I use Total Commander, though, and for some reason Total Commander doesn't refresh the font color. I'm not sure if that's an issue with Carbon or Total Commander. Anyways, the text looks dark and not easy to read if that's the case. Edit: Oh, so I just tried it without Total Commander and suddenly it looks lovely. I've always loved the way Total Commander made it easy to move files around, but I never realized that it affected the colors as well until now. Edit 2: Yeah, I'm not sure what's up with my PC. I haven't done anything apart from this and other small tasks. But for some reason that doesn't work. I tried moving the file, and that didn't work. I tried editing the Total Commander settings, and that still didn't work. Windows solved it, and I'm just happy it does.

Sorry about this. This game is an amazing game! Every time I play this game it just gets better and better with time. I am glad they made a port, and glad there is so much development. Check out what I am talking about
