AutoCAD is a de facto standard in the industry and one of the most widely used CAD programs. Over 100 million people worldwide use AutoCAD across a variety of industries and professions, including architects, builders, engineers, designers, students, architects, professors, and students. Its native ability to read and edit standard drawing standards, such as the AutoCAD Drawing Protocol (ADP), make it universally applicable. AutoCAD was ranked as the top CAD program in user satisfaction by the 2011 CAD Customer Satisfaction Survey conducted by the Association for Computer Aided Design in the United States. AutoCAD Architecture The AutoCAD Architecture component in the AutoCAD 18.0 family supports the complete CAD workflow, including the following: Autodesk supports AutoCAD Architecture since AutoCAD 2014. Architecture works best with AutoCAD and related software products that support the Architecture Data Language (ADL) standard. AutoCAD Architecture has many advanced functions that other applications do not have. For example, it can work with other types of CAD data, such as drafters' DGN files, DWG files, and 3D models, and it can also work with most of the industry standard Drawing Protocols, such as DWG, DWF, DXF, DGN, and STL. Architecture is also a highly configurable program that allows users to customize its interfaces and workflows. AutoCAD Architecture is available as both a standalone application and as a component in AutoCAD. Architecture can also be accessed as a web service. Features AutoCAD Architecture supports all essential design functionality that other CAD applications provide, such as the following: Curves Chamfers Fillets Seams Gouges Radii Angle dimensions Dimensions Solid modeling Text formatting Type tools Numeric formatting Vector grids Scaling and projection Creation of AutoCAD Architecture (AA) and AutoCAD DWF files Creation of AutoCAD DWG files Creation of AutoCAD DXF files Creation of AutoCAD DGN files Creation of AutoCAD STL files Creation of AutoCAD VPS files Creation of AutoCAD MPS files Design, Analysis, and Reporting Architecture can generate presentation-

Characterization of a biodegradable polyanhydride-based sustained-release microsphere of griseofulvin. Griseofulvin, a poorly water-soluble antifungal drug, was successfully encapsulated into microspheres of a biodegradable copolymer poly(glycolic acid-co-epsilon-caprolactone) using an emulsion solvent evaporation technique. The microspheres showed a burst release in the first 8 h, followed by a sustained release over a period of 6 days. In vitro release studies showed that the release rate of the drug increased with an increase in the initial drug content of the microspheres, indicating that the drug content of the microspheres played an important role in the release of the drug. The in vivo release studies showed that after a single subcutaneous dose of microspheres containing 25% of the drug, the drug level in the blood plasma was maintained in the therapeutic range for more than 7 days. An in vivo study of the drug's systemic pharmacokinetics indicated that the bioavailability of the microspheres containing 25% of the drug (18.3 +/- 3.8%) was significantly (P / * * Copyright (c) 2002, 2003, Oracle and/or its affiliates.
