Anti-Glare [Mac/Win]

Anti-Glare is a handy and easy to understand piece of software that was developed to provide intense PC users with a method of protecting your eyes from extended strain and fatigue, by enabling you to apply a colored filter which can dull the brightness of the monitor. Simple and practical usage The application is fairly easy to work with and requires a minimal level of prior experience, all you need to do to launch it is double-click the shortcut on your desktop. While it may not be obvious from the very start, in order to close it, you need to right-click when the filter is active and choose the 'Exit' option from the context menu. Apply a colored filter to reduce screen glare Anti-Glare allows you to adjust the brightness level, using a 'Darker' or 'Lighter' shade, depending on your individual needs, which can be configured either by using the corresponding options from the context menu or by resorting to keyboard shortcuts (CTRL+L and CTRL+D to increase or decrease brightness, respectively). Moreover, the utility enables you to change the filter's color to whichever shade you prefer, allowing you to use various 'Basic' colors, or create your own, custom ones. From the 'Settings' section, you have the possibility of saving the current color and brightness configuration or activate the ability to minimize the utility using simple mouse clicks. Anti-Glare even lets you display a set of preferred images as a screensaver. All you need to do is import the pictures from the 'Start' menu, by browsing through your computer and selecting the items that you want to use. You can even set a time delay between each photo. A handy tool for reducing monitor damage on your eyes To conclude, Anti-Glare is a user-friendly and reliable program that you can resort to should you feel the need to reduce the eye strain caused by daily computer work, allowing you to be able to continue with your tasks more easily.
