Stacks Docklet Free

Stacks Docklet (320KB, 6.6 MB, Mac OS X) - One of the coolest Docklets on the market right now. You can manage any folders on your Mac in a way you've never seen before. It can be used to view files and folders from any disk. You can select the folder, the order and hide any files/folders. With the Stacks Docklet you have a simple way to access your documents and files. Stacks Docklet Features: - All the folder items are easy to access - You can drag and drop the files to the Stacks Docklet - To access the Stacks Docklet you need to drag and drop the item you want to see from the Dock into the Stacks Docklet - The files and folders can be hidden - The files can be sorted by type, date or size - You can set the appearance style - You can set the number of files displayed per row, column or page - You can easily add, delete and rename the files - You can customize the appearance of the icons (optional) Stacks Docklet User Guide: 1. Unzip Stacks Docklet and copy the files to the Docklets folder inside the RocketDock installation folder. 2. The docklet does not run if it is already installed, so you need to uninstall it first. 3. If you can't see the Stacks Docklet in the dock just right click on it and select "Stacks Docklet". 4. The docklet can be configured to display the content of any folder from your computer. 5. When you click its icon the included files and folders pop up on your desktop and you can easily click one in order to open it. 6. The files can be sorted by name, creation date or by file type. 7. The size of the grid is automatically adjusted by the docklet in order to fit all the items. 8. If you prefer to use a certain display style you can specify this in the Options window that

also allows you to change the font and the text size. 9. This tool is useful for the users that need to access a certain folder frequently in order to view the files or to edit them. 10. Its inability to manage or to rename the files makes it a poor replacement for the Windows Explorer but it still looks better. 11. The response time depends on the computer configuration since the dock

Stacks Docklet Torrent (Activation Code) X64

Stacks Docklet is a handy extension that allows you to view the items from a folder in a Leopard OS style. The extension works with the RocketDock application and can be added on the dock in order to enhance its navigation capabilities. In order to use the add-in you need to unzip the archive and copy the files to the Docklets folder from the RocketDock installation folder. You can add the docklet to the RocketDock interface from the context menu. To select the folder and the thumbnail you need to customize the icon settings. The docklet can be configured to display the content of any folder from your computer. When you click its icon the included files and folders pop up on your desktop and you can easily click one in order to open it. The files can be sorted by name, creation date or by file type. The number of files contained by the folder determines the display style. If there are too many files to be displayed as a fan, the files are organized in a grid. The size of the grid is automatically adjusted by the docklet in order to fit all the items. If you prefer to use a certain display style you can specify this in the Options window that also allows you to change the font and the text size. This tool is useful for the users that need to access a certain folder frequently in order to view the files or to edit them. Its inability to manage or to rename the files makes it a poor replacement for the Windows Explorer but it still looks better. The response time depends on the computer configuration since the docklet animation occupies a lot of CPU time. In our tests, the dock seemed to briefly freeze when using a folder with more than three hundred files with the automatic grid view. Also, the grid expanded beyond the monitor so not all the files were visible. Overall, the Stacks Docklet is an alternative for the users that prefer the RocketDock navigation instead of the classical Windows Explorer. What's New In?

Stacks Docklet provides a unified way to view the items from a folder in a Leopard OS style. The docklet is free and only needs to be added to the dock of your Leopard OS. The files and folders contained by the folder are displayed on the desktop and can be easily clicked to open them. The number of files and folders determines the display style. If there are too many files to fit the screen, they are organized in a grid. The size of the grid is automatically adjusted in order to fit all the items. If you prefer a certain display style, you can specify this in the Options window that also allows you to change the font and the text size. The docklet provides the functionality of a virtual folder but it can be configured to show the content of any folder from your computer. Also, the files can be sorted by name, creation date or by file type. The extension allows to see all the files at once by clicking the icon. Also, you can select multiple files and folders and copy or move them to another location. The tool is useful for the users that need to access a certain folder frequently. Its inability to manage or to rename the files makes it a poor replacement for the Windows Explorer but it still looks better. The response time depends on the computer configuration since the docklet animation occupies a lot of CPU time.

Description: RocketDock 2.0 is a new, much-improved version of the popular open source launcher. The new RocketDock 2.0 is a rewritten, faster, more stable application that adds many new features and completely new interface. It has been rewritten from the ground up using Cocoa technologies such as AppleScript and NSAnimation. The main changes in RocketDock 2.0 are:
