FreeDist Crack [Latest]

Download

FreeDist Free License Key

FreeDist converts postscript files to PDF files. This is an automatic frontend to Ghostscript that watches a specified folder for new postscript files. Each postscript file is converted to a PDF file in a predefined folder and a PDF file with a unique ID is generated. Each of these PDF files can be opened with Ghostscript so they can be converted to EPS, EPS, PS, etc. Copyright (c) 2010 Jan Boesgaard All rights reserved. The FreeDist application was designed to be a free postscript to PDF convertor that acts as a frontend for Ghostscript. It watches a specified folder for new postscriptfiles and converts them automatically and unattended to PDF in a predefined outputfolder. FreeDist can also merge multiple postscript and/or PDF files into one PDF in the order you need. The PDF files can also be encrypted for editing and/or for reading.
