In response to the rapidly evolving, multi-screen digital aesthetic, Adobe has expanded the Creative Cloud Collection with the first collection of mobile industry-first features—across creative applications and services, including new mobile web features, add-on mobile app extension for Photoshop, and many other enhancements. Adobe has announced support for Creative Cloud, which means many features are now available for free, including version-controlled websites, simple design workflows, and instant updates. In addition to content creation, the latest version will give you access to a team tool, version synchronization, and more. Designers used to rely upon expensive desktop suites like Illustrator, InDesign and Photoshop. But now, thanks to the fact that all these apps can be rented or purchased for free as part of a Creative Cloud membership, building a magazine can be done almost entirely with free, cloud-based apps for PCs, Macs and mobile devices. Adobe has also made each app—Illustrator, InDesign, Photoshop, Premiere Pro and After Effects—work seamlessly together with Creative Cloud, and they can be used independently. The upgraded applications come with some minor changes as well, as the only notable change to Lightroom is the new Live Gaussian Blur function, but Photoshop gets to take on some new features. The most notable of the new features is a permanent Live Gauss Blur, which is now available in Sharpening. It allows you to quickly and easily blur textures and other elements on the fly. This means that you can remove unwanted noise or blur motion blur quickly and easily. Users can also use the Gaussian Blur and Sharpen tools together to optimize textures and blur motion. Here's a before and after:
